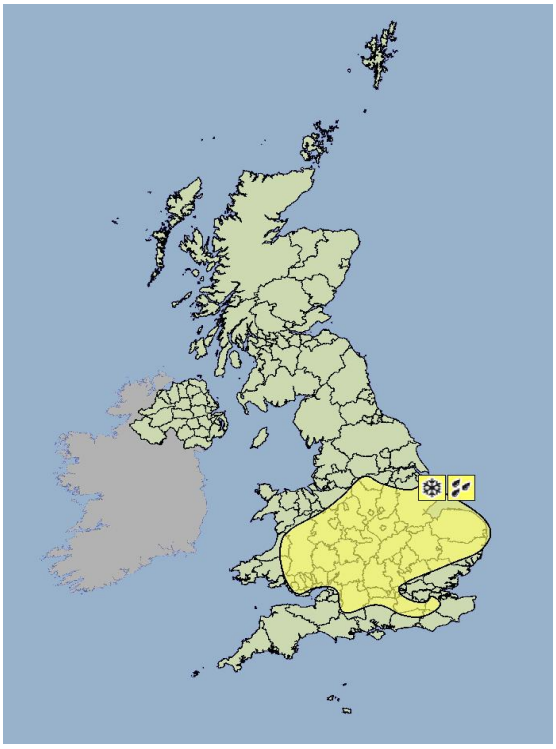
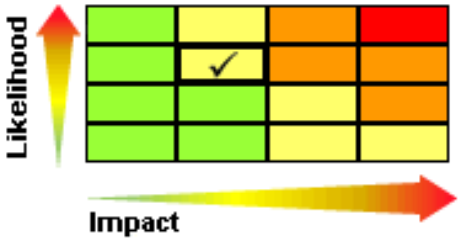
National Severe Weather Warning Service





Chief Forecasters Assessment
A weather system moving east across southern England and Wales will bring a mixture of heavy rain and snow. 15-25 mm of rain is expected quite widely within the warning area with some places receiving 40-50 mm.

Through the night, it is likely to turn to snow in places, initially over higher ground Wales and perhaps the Peak District, then central and eventually southern England on Wednesday morning. Snow is expected to settle mainly above 100 m with a cm or two for most, locally 2-5 cm and perhaps up to 10 cm in a few places. These larger amounts are more likely over the highest ground.

The warning has been updated to remove northwest Wales, but extend the area to include higher ground in southern England and Wales.

The Met Office have issued a **Yellow Warning** of **Rain and Snow**

Valid from **18:00 on Tue, 26th Dec 2017** until **11:00 on Wed, 27th Dec 2017**

Heavy rain turning to snow in places.

An area of heavy rain will extend northeast across the area later on Tuesday, easing from eastern areas on Wednesday. The rain is likely to turn to snow in places, mainly over higher ground, initially across Wales, then across parts of central and eventually southern England.

Some roads and railways are likely to be affected by longer journey times due to standing water or snow. Some delays to air travel due to snow are possible. There is also a smaller chance that individual homes and businesses could be flooded.
